VNUHCM – UNIVERSITY OF SCIENCE
FACULTY OF INFORMATION TECHNOLOGY

CS252 – COMPUTATIONAL THINKING

TEAM CONTRACT

AI-Powered Email and Multi-Platform Information Management Assistant

Team Name: Cẩm Lan

1. 25125074 – Nguyễn Anh Kiệt *(Team Leader)*
2. 25125003 – Ngô Thảo Anh
3. 25125039 – Nguyễn Lê Trân
4. 25125043 – Nguyễn Quang Hiếu
5. 25125045 – Trần Như Khải
6. 25125057 – Trần Minh Khoa
7. 25125078 – Đinh Nguyễn Hồng Ánh

Ho Chi Minh City, October 2026

1. Team Information

1.1 General Overview

- **Team Name:** Cẩm Lan
- **Project Title:** AI-Powered Email and Multi-Platform Information Management Assistant
- **Number of Members:** 7

1.2 Member Roster and Contact Details

Table 1 lists the full name, student ID, preferred contact method, and email address for each member of Team Cẩm Lan.

No.	Student ID	Full Name	Contact Method
1	25125074	Nguyễn Anh Kiệt	Facebook
2	25125003	Ngô Thảo Anh	Facebook
3	25125039	Nguyễn Lê Trân	Facebook
4	25125043	Nguyễn Quang Hiếu	Facebook
5	25125045	Trần Như Khải	Facebook
6	25125057	Trần Minh Khoa	Facebook
7	25125078	Đinh Nguyễn Hồng Ánh	Facebook

Table 1: Team Cẩm Lan Member Information

2. Team Goals and Expectations

- **Project Goal:** Design, engineer, and evaluate **AI-Powered Email and Multi-Platform Information Management Assistant**, an intelligent virtual assistant that classifies incoming emails by importance and recommends concrete follow-up actions. The system will strictly follow a computational thinking pipeline (*Request* → *Understand* → *Route* → *Retrieve/Compute* → *Reason* → *Verify* → *Respond/Act*), combining deterministic algorithms/rules with AI capabilities rather than relying on a single LLM wrapper.
- **Target Grade and Quality Level:** Our team aims for an **A+ (9.0–10.0 / 10.0)** grade by delivering a reproducible, well-tested prototype and comprehensive engineering documentation that satisfies all Minimum System Requirements (R1–R8) and all seven submission packages.
- **Effort Commitment:** Every member commits to putting in consistent weekly effort (approximately 6–8 hours per week) across the 10-week project arc. While members hold primary functional roles, every member will participate across problem analysis, computational thinking design, evaluation, and documentation.

3. Roles and Responsibilities

3.1 Role Breakdown

- **Team Leader (Nguyễn Anh Kiệt):** Coordinates weekly milestones, facilitates meetings, serves as the primary point of contact for the instructor, manages the project board, oversees architectural integration, and resolves scheduling or technical bottlenecks.
- **Developers (Nguyễn Lê Trân, Ngô Thảo Anh, Nguyễn Quang Hiếu):** Design the system architecture, implement deterministic rules/algorithms, build the data retrieval and AI/LLM orchestration pipelines, and develop the end-to-end user interface.
- **Tester (Trần Như Khải):** Constructs the repeatable benchmark dataset, designs the evaluation rubric and error taxonomy, conducts unit/integration/regression testing, executes red-team prompt-injection tests, and tracks before/after metrics across improvement cycles.
- **Documentation & Presenters (Đinh Nguyễn Hồng Ánh, Trần Minh Khoa):** Record weekly meeting minutes and the Team Logbook, author and format the 12–18 page Engineering Report in LaTeX, maintain Architecture Decision Records (ADRs) and system diagrams, and lead the final presentation and live defense.

3.2 Member Strengths and Areas for Growth

Table 2 outlines each member's core strengths and potential weaknesses so the team can proactively support one another.

Member	**Role**	**Strengths**	**Weaknesses / Growth Areas**
Nguyễn Anh Kiệt	Team Leader	Project planning, task coordination, clear communication, system-level thinking	Can take on too many tasks personally when deadlines are tight
Ngô Thảo Anh	Developer	Backend logic, data structures, clean coding practices	Can spend excessive time optimizing early prototypes
Nguyễn Lê Trân	Developer	Algorithm design, API integration, rapid prototyping	Prefers coding over writing formal documentation
Nguyễn Quang Hiếu	Developer	UI/UX implementation, pipeline integration, debugging	Occasional context-switching across multiple coursework tasks
Trần Như Khải	Tester	Edge-case analysis, systematic testing, benchmark curation	Needs early specification freeze from developers to write automated tests
Trần Minh Khoa	Docs & Presenter	Technical writing in LaTeX, structured problem decomposition, presentation delivery	High perfectionism with formatting and slide aesthetics
Đinh Nguyễn Hồng Ánh	Docs & Presenter	Clear synthesis of technical concepts, logbook organization, visual communication	Less hands-on experience with low-level backend deployment

Table 2: Individual strengths and growth areas.

3.3 Role Rotation Policy

To maintain workflow stability and deep ownership, roles remain fixed by default. However, **roles may be rotated or reassigned dynamically** under either of the following conditions:

1. A member repeatedly fails to complete assigned tasks on time without valid prior notice, requiring task redistribution to protect project milestones.

2. A member feels uncomfortable, overwhelmed, or mismatched with their assigned workload and requests a role adjustment during a weekly sync.

4. Communication

4.1 Communication Channels and Main Contact

- **Internal Member Communication:** Facebook.
- **Official Email Contact:** `kietnguyenanh0709@gmail.com`
- **Main Contact for the Instructor:** Team Leader – Nguyễn Anh Kiệt.

4.2 Expected Response Time

Members are expected to respond to emails and official messages within **at most 1 day (24 hours)** after receipt.

5. Meetings

- **Regular Schedule:** Every **Sunday at 21:00** via **Google Meet**.
- **Meeting Agendas:** The Team Leader will post a brief agenda in the Facebook group at least 6 hours before the meeting (covering progress review, blockers, architectural decisions, and next week's task allocation).
- **Meeting Notes:** The **Documentation & Presenter** sub-team (Đinh Nguyễn Hồng Ánh and Trần Minh Khoa) is responsible for recording meeting minutes, decisions, and action items in the shared Team Logbook within 24 hours of each meeting.
- **Attendance & Punctuality Rules:**
  a) **Be on time:** Members must join the Google Meet link by 21:00 sharp with working audio.
  b) **Absence notification:** If a member cannot attend or will be late, they must notify the Team Leader via Facebook **at least 12 hours in advance** (except in genuine emergencies) and submit their written progress update prior to the meeting.
  c) **Preparation:** Every member must update the status of their assigned tasks before the meeting starts and review the meeting minutes afterward if absent.

6. Work Process and Standards

6.1 Task Assignment and Internal Deadlines

- **Task Allocation:** Tasks are assigned based on each member's primary role and tracked on a shared issue/task board (GitHub Projects).
- **Internal Deadlines:** Specific internal deadlines for modules, evaluations, and report sections will be locked in immediately after the team finalizes the core architectural solution. Internal deadlines will be set at least **48 hours prior** to official course milestones to allow buffer time for testing and peer review.

6.2 Git Workflow

All seven members will actively use the shared GitHub repository (contributing code, test cases, benchmark datasets, and documentation), while core feature development is led by the Developers:

- **Branching Strategy:** The `main` branch is protected and reserved for stable, demo-ready releases. Active integration occurs on `develop`, and individual tasks use descriptive feature branches.
- **Commit Messages:** Follow conventional commit prefixes (`feat:`, `fix:`, `docs:`, `test:`, `refactor:`) with concise, meaningful summaries.
- **Pull Requests & Reviews:** No direct pushes to `main`. Every Pull Request (PR) requires at least one peer review (from the Team Leader, a Developer, or the Tester) and must pass existing validation checks before merging.

6.3 Quality Standards for Code, Documents, and AI Usage

- **Code Quality:** Code must be modular, clearly typed/commented, and reproducible via environment configuration files. Deterministic logic, routing, and AI calls must be cleanly separated.
- **Security & Privacy:** Never commit API keys, passwords, or real personal/university emails to the repository. Use `.env.example` templates and synthetic/anonymized email datasets.
- **Documentation Standards:** All reports and design packs must be written in clear academic English, compiled cleanly in LaTeX, and backed by concrete architectural diagrams, pseudocode, and empirical metrics.
- **AI Tool Governance:** Whenever AI tools (e.g., ChatGPT, Gemini, Copilot) are used for brainstorming, coding, or drafting, the responsible member must manually verify, test, and log the usage in the Team Logbook.

7. Team Governance and Management

7.1 Decision Making

Team decisions will be made through discussion and majority voting. All members are encouraged to share their opinions and participate in the decision-making process. If the team cannot reach an agreement, the team leader will have the final say to ensure that decisions are made efficiently and the project can proceed smoothly.

7.2 Conflict Resolution

Team members should address disagreements through respectful and direct communication to reach a mutual understanding. If the conflict cannot be resolved between the members involved, the team leader will mediate and help find a solution. If the issue remains unresolved, the team may seek guidance from the instructor to ensure a fair and appropriate resolution.

8. Accountability and Contract Administration

8.1 Accountability and Consequences

- **Violations:** Missing deadlines or meetings without prior notice, failing to complete assigned tasks, and consistently contributing less than agreed.
- **Handling violations:** The first violation results in a warning and discussion with the member. Repeated violations may lead to task reassignment or a report to the instructor if the issue remains unresolved.
- **Evaluating contributions:** Contributions are assessed based on task completion, work quality, meeting participation, communication, and overall effort. Team members should provide regular updates on their progress.

8.2 Changing the Contract

- **Proposing changes:** Any team member can propose an amendment if the current rules no longer meet the team's needs.
- **Discussion and approval:** Proposed changes must be discussed by all members before a vote.
- **Required agreement:** At least half of team members must approve a change for it to take effect. The team leader documents the approved changes and informs all members.
- **Fairness:** Changes should apply equally to all members.

9. Academic integrity and AI use

9.1 Academic Integrity

All team members must uphold academic integrity by producing original work, avoiding plagiarism, and ensuring that all submitted work reflects honesty and individual responsibility. Each member is expected to contribute fairly and comply with the institution's academic policies.

9.2 Generative AI Use

The use of generative AI tools must comply with the course's guidelines and requirements. AI may be used to support learning, brainstorming, or improving work where permitted, but members must not present AI-generated content as entirely their own when disclosure is required. Each member is responsible for verifying AI-generated information and acknowledging AI assistance.

9.3 External Sources and Citations

All external sources, including books, academic papers, websites, and other reference materials, must be properly cited using the required referencing style.
